for a period of some fifteen years following completion of my internship training in clinical psychology 1950 1951 at the washington university school of medicine and my concurrent successful navigation through that school s neuroanatomy course clinical work in neuropsychology for me and the psychologists of my generation consisted almost exclusively of trying to help our physician colleagues differentiate patients with neurologic from those with psychiatric disorders in time experience led all of us from the several disciplines involved in this enterprise to the conclusion that the crude diagnostic techniques available to us circa 1945 1965 had garnered us little valid information upon which to base such complex differential diagnostic decisions it now is gratifying to look back and review the remarkable progress that has occurred in the field of clinical neuropsychology in the four decades since i was a graduate student in the late 1940s such pioneers as ward halstead alexander luria george yacorzynski hans lukas teuber and arthur benton already were involved in clinical studies that by the late 1960s would markedly have improved the quality of clinical practice however the only psychological tests that the clinical psychologist of my immediate post second world war generation had as aids for the diagnosis of neurologically based conditions involving cognitive deficit were such old standbys as the wechsler bellevue rorschach draw a person bender gestalt and graham kendall memory for designs test

with the emergence of clinical neuropsychology as one of the fastest growing specialties in psychology comes the need for current and future practitioners to stay abreast of the most recent research a number of professional journals more than adequately meet this need but there is also a need to stay up to date on the current thinking about important problems drawing upon the expertise of leaders in the field the editors intent in this book was to provide the practitioner with a source for discussions of topics that are vital to their ongoing development as clinical neuropsychologists but that generally are not addressed in the literature to any great degree

in the last decade neuropsychology has grown from a small subspecialty to a major component in the practice of clinical and medical

psychology this growth has been caused by advances in psychological testing such as the halstead reitan neuropsychological battery as discussed in chapter 5 that have made evaluation techniques in the field available to a wider audience by advances in neuroradiology and related medical areas that have enabled us to better understand the structure and function of the brain in living individuals without significant potential harm to those individuals and by increased interest by psychologists and other scientists in the role that the brain plays in determining behavior many disorders that were believed by many to be caused purely by learning or environment have been shown to relate at least in some cases to brain dysfunction or damage with the growth of the field there has been increased interest in the work of neuropsychologists by many who are not in the field
