a comprehensive study in efficient multi rate teletraffic loss models used for designing performance analysis and optimization of systems and networks efficient multirate teletraffic loss models beyond erlang is an easy to read book filled with numerous efficient teletraffic loss models presented in three sections teletraffic models of random input teletraffic

models of quasi random input and teletraffic models of batched poisson input it covers everything that a professional experienced with optimization and dimensioning of telecom networks could ever need to know this unique book provides a detailed explanation on how efficient multirate teletraffic loss models are extracted and applied and guides readers through almost all network technologies and services starting from the basics it steadily increases in difficulty to keep the book self contained and to provide a better understanding to those who might be new to the subject it includes detailed explanations of the complex teletraffic models many of which were developed by the authors tutorial examples several backed by supplementary software are accompanied by intermediate results and figures additionally end of chapter applications describe the applicability of the models to modern network technologies updating the incorporated teletraffic models of commercial packages tools uses the classic emlm erlang multirate loss model as its base to present a comprehensive range of teletraffic models through detailed explanation and numerical examples filled with the authors own original teletraffic models making for a wholly unique learning experience offers a clear self contained presentation with a beginning middle and end starts with simple models then moves to more complex models before finishing with complicated ones supplemented by an accompanying website with computer implementation of the most important models directed primarily at telecommunication engineers efficient multirate teletraffic loss models beyond erlang is also useful for telecom operators or managers on the higher and average levels as well a ph d students researchers and modelers

in agent based modeling the focus is very much on agent based simulation as simulation is a very important tool for agent based modeling we also use agent based simulation in this book with a stress on the mathematical foundation of agent based modeling we introduce two original mathematical frameworks a theory of sld social learning dynamics and an axiomatic theory of economic exchange exchange algebra among agents exchange algebra gives bottom up reconstruction of sna system of national accountings sld provides

the concept of indirect control of socio economic systems to manage structural change and its stability we also compare agent based simulation with gaming simulation and investigate the epistemological foundation of agent based modeling

differentiated services one of the hottest topics in networking will help network engineers prioritize network traffic this book explores the technical specifications of differentiated services as developed and defined within the internet engineering task force ietf standards body

this volume contains 11 thoroughly refereed and revised papers detailing recent advances in research on designing trading agents and mechanisms for agent mediated e commerce they were originally presented at the joint workshop on trading agent design and analysis tada 2012 and agent mediated electronic commerce amec 2012 co located with aamas 2012 in valencia spain in june 2012 the increasing reliance on software agents has created a range of pressing new research challenges including the design of appropriate agent decision algorithms approaches for predicting the complex behaviors and interactions of multiple agents including the computation of equilibria and the engineering of protocols and mechanisms that ensure electronic markets behave in a stable manner or fulfill other desirable criteria drawing upon a diverse range of scientific disciplines including computer science economics artificial intelligence operations research and game theory the papers collected in this volume represent a cross section of recent research and cover topics such as strategies for individual trading agents the design of markets and interaction protocols between agents and a variety of applications
