this book is a collection of best selected research papers presented at the international conference on communication and artificial intelligence iccai 2021 held in the department of electronics communication engineering gla university mathura india during 19 20 november 2021 the primary focus of the book is on the research information related to artificial intelligence networks and smart systems applied in the areas of industries government sectors and educational institutions worldwide diverse themes with a central idea of sustainable networking solutions are discussed in the book the book presents innovative work by leading academics researchers and experts from industry

this book aims to provide sustainable solutions for better understanding and management of online education in different parts of the world in this context it explores the attitudes and perceptions of stakeholders such as students faculty and other actors on issues related to online education in particular it examines the challenges they have faced over the years when online courses were introduced due to the covid 19 pandemic a model is proposed that includes five variables specific communication issues in online education the ability of professors to offer online courses the quality of online education students perceived stress during online education and the technical requirements of online education the book will be of interest to anyone concerned with the new and future ways of teaching and learning chapter when a phenomenon based university course went online students experiences and reflections after sauna bathing is available open access under a creative commons attribution 4 0 international license via link springer com

this book covers algorithmic aspects of computer aided circuit design for vlsi of large circuits the large scale aspect of vlsi requires a reorientation towards new and more efficient techniques many algorithms have survived the test of time while others are suffering from the usual problem of polynominal or exponential running time complexity and storage requirements the approaches presented in this book are techniques which were developed in response to the vlsi problems the most recent exact circuit analysis and simulation techniques are presented such as waveform relaxation and timing simulation the book concentrates on the analysis and simulation of large circuits which exceed the capabilities of general purpose analyzers in both compute time and storage also discussed are circuit models for switch level simulation techniques and circuit models for interconnections capacitance and inductances and optimization techniques the language and notation have been kept uniform throughout the book to help the reader to maintain the continuity between the topics discussed in the different chapters all algorithms are written in a pascal style the terminology used should reflect the emerging language used in most of the vlsi circuit design community the book includes proven approaches as well as techniques which are presently in a research state
